www.Nevermorelab.com - github.com/InfiniteInsight

Summary: Cybersecurity Architect with deep Systems Administration roots. Heavy focus on self-improvement through self-education and mentoring others. Actively engaged, naturally curious with a positive outlook. I'm not just a warm body in a seat. I use my test lab to analyze, explore concepts, protocols, and programs. I can wear many hats!

>_ {Xperi} -

Security Architect 9/1/25 to Current
Senior Enterprise Security Engineer 8/2/22 to 9/1/25
Enterprise Security Engineer 7/2/21 to 8/1/22

- **Management of Public Key Infrastructure and related processes**
 - Eliminated expired Security Certificate outages through process improvement, documentation, and automation.
 - Complete Key Lifecycle Management
 - Encryption of data at rest and data in transit
 - OpenSSL, OpenPKI, Hashi Vault, Sectigo Cert Manager, ADCS
 - Implementation of ACME protocol
- **Digital Forensics and Incident Response**
 - Reduced eradication and remediation time by half
 - Investigation of suspected and confirmed incidents
 - Verify intrusion hypothesis through log analysis and Network Traffic Analysis
 - Capture volatile memory and Machine Images for evidence and analysis.
 - Communication with management and stakeholders about status.
 - Attribution and analysis of attacks and actors.
 - Write detailed and understandable reports to ensure the incident is captured start to finish, lessons are learned and implemented.
- **Cloud Security**
 - Reduced persistent overexposure CSPM (Cloud Security Posture Management) alerts by 90% in Azure, AWS, and GCP through education of technical teams. No new related alerts have been observed for a period of over 6 months.
 - Eliminated errant CloudFront configurations that allowed application load balancers to be accessed directly by way of secret headers.
 - Cloud Hardware Security Module configuration
- **SOC Operations and Business Security**
 - Set up, configure and operationalize Microsoft 365 E5 Security
 - Defender for Endpoint XDR, Email Threat Policies, Attack Surface Reduction Policies
 - Sentinel SIEM and SOAR: Create alerts, review alerts, create workbooks and playbooks, integrate Threat Intelligence
 - Bitlocker, FileVault and LUKS policies
- **Network Security**
 - Review firewall settings and make suggestions for improving posture through surface reduction.
- **Vulnerability Management**
 - Ensuring internet exposed assets have no severity 4 or 5 issues
 - Execute a regular scan cadence with Qualys and review reports.

- **Threat Hunting**

1

- Identifying intrusions and improvement opportunities that did not trigger alerts by being curious, asking questions and looking in obvious and non-obvious places.

- **Application Security**

- Validation of vulnerabilities using Postman, Burp Suite, and POCs.
- Continuous Integration / Continuous Delivery Pipeline implementation of Coverity, Collaborator, SonarQube, and GitHub Actions
- Software Bill of Materials
- Code Signing Certificates

- **Policies, Standards, Strategy, Audits**

- PCI, GDPR, CCPA, NIST 800-53
- Policies Maintenance - cryptography, acceptable use, cloud, etc.
- Vendor Selection
- Internal Audits of configurations, external audit participation
- Round table exercises

- Writing detailed and clear documentation.

- Cyber Threat Intelligence / Track the pulse of the global threat landscape with OSINT.

- Use Jira and ServiceNow for tracking issues, incidents and requests.

- Use of Python, JavaScript, PowerShell for automation and tooling.

>_ {Xperi} - *Systems Administrator 9/10/2018 to 7/1/21*

- Managed Multi-forest Active Directory environment and related services; DHCP, DNS, DFS, Group Policy, etc. in a small team across the globe pre-merger. • Microsoft Exchange in a hybrid configuration.

- Windows and Linux Administration, including commercial off the shelf and proprietary applications.

- Configuration/Infrastructure as code via Ansible.

- vmWare, Nutanix

- NetApp/EMC network attached storage and storage area networks

- PowerShell and Automation

- Machine Learning Support

- PKI

- Tier 3 Support for Help Desk

- Documentation and technical writing

- Scheduling and testing of backups

- Monitoring of systems and services

- Troubleshooting and critical thinking

>_ {Maryland Transportation Authority} via Elegant Enterprise Wide Solutions - IT
Technical Systems Administrator 7/24/17 to 9/9/2018

- Authority Operations Center subject matter expert
- Tier 3 for Help Desk
- Patch testing and deployment through SCCM
- Permissions audits
- Coordinate with service desk staff to configure, test, and support Active Directory, Group Policy, and all endpoints and infrastructure
- Complete lifecycle systems architecting, installation, configuration and maintenance of servers, corresponding settings and applications
- PowerShell

>_ {Eurofins E&E} (prev. MET Labs) - Systems Administrator 2013 - 7/21/2017

2

- Monitor network and asset health
- Manage Helpdesk queue, research and provide solutions, and follow up on outstanding issues
- Active Directory and permissions auditing
- Microsoft Exchange 2013, Skype for Business and SharePoint 2013 • Standard image maintenance and deployment through Windows Deployment Services (WDS) and Microsoft Deployment Toolkit (MDT)
- Group Policy
- Order equipment and software
- Troubleshooting and modifying programs written in-house by departed employees • Salesforce Administration
- Proactive preventative maintenance
- Running cable
- Quality Assurance (QA) testing for internally developed applications • PowerShell and Scripting Automation
- Extensive and clear documentation that anyone can follow
